INTRODUCTION

The present volume contains the results of the meteorological observations made at the Central Meteorological Observatory and the other local stations in Japan for the month of July, 1939.

All the observations and computations have been conducted uniformly, according to the Instructions issued by the Central Meteorological Observatory. Among the Instructions, the following points are specially to be noticed :—

Time used.—The Central Standard Time (civil mean time of the Meridian 135°E.) is adopted at all the localities. For the measure of sunshine duration the apparent solar time is used.

Pressure.—The barometric readings given in millimetres are reduced to freezing point only ; the corrections to mean sea level (C_h) and to standard gravity (C_g) are given at the top of the respective page.

Temperature.—The temperatures are given in Centigrade degrees ; those below zero are shown by adding 100, to avoid the minus sign ; thus 99° stands for −1°, and 95° for −5°, etc.

Velocity of the Wind.—As the wind velocity at the hour of observation is taken the mean velocity for the preceding 20 minutes. Since January first of the year 1925 a new factor for the Robinson anemometer has been used. The ratio of new factor to the old one is 0.7/1.0.

Amount of Precipitation.—The amount of precipitation given in millimetres is the total sum of the preceding 24 hours ending at mid-night for the stations making hourly observations and that ending at the 22nd hour or 10 p.m. for the stations making four-hourly observations, etc.

Clear and Cloudy Days.—The mean amount of cloud for a clear day is less than 2 exclusive, and that for a cloudy day is more than 8 inclusive.

Days with Gales.—By the day with gale is meant a day on which the maximum wind velocity reaches or exceeds 10 metres per second.
